# Excel-DNA Intellisense install guide

First, unzip the downloaded DFX.zip file and extract the content. Then, install the 32-bit or 64-bit version, depending on your Excel. We recommend you use the 64-bit version. Intellisense provides native help for the function, but **the main add-in works fine without Intellisense.**
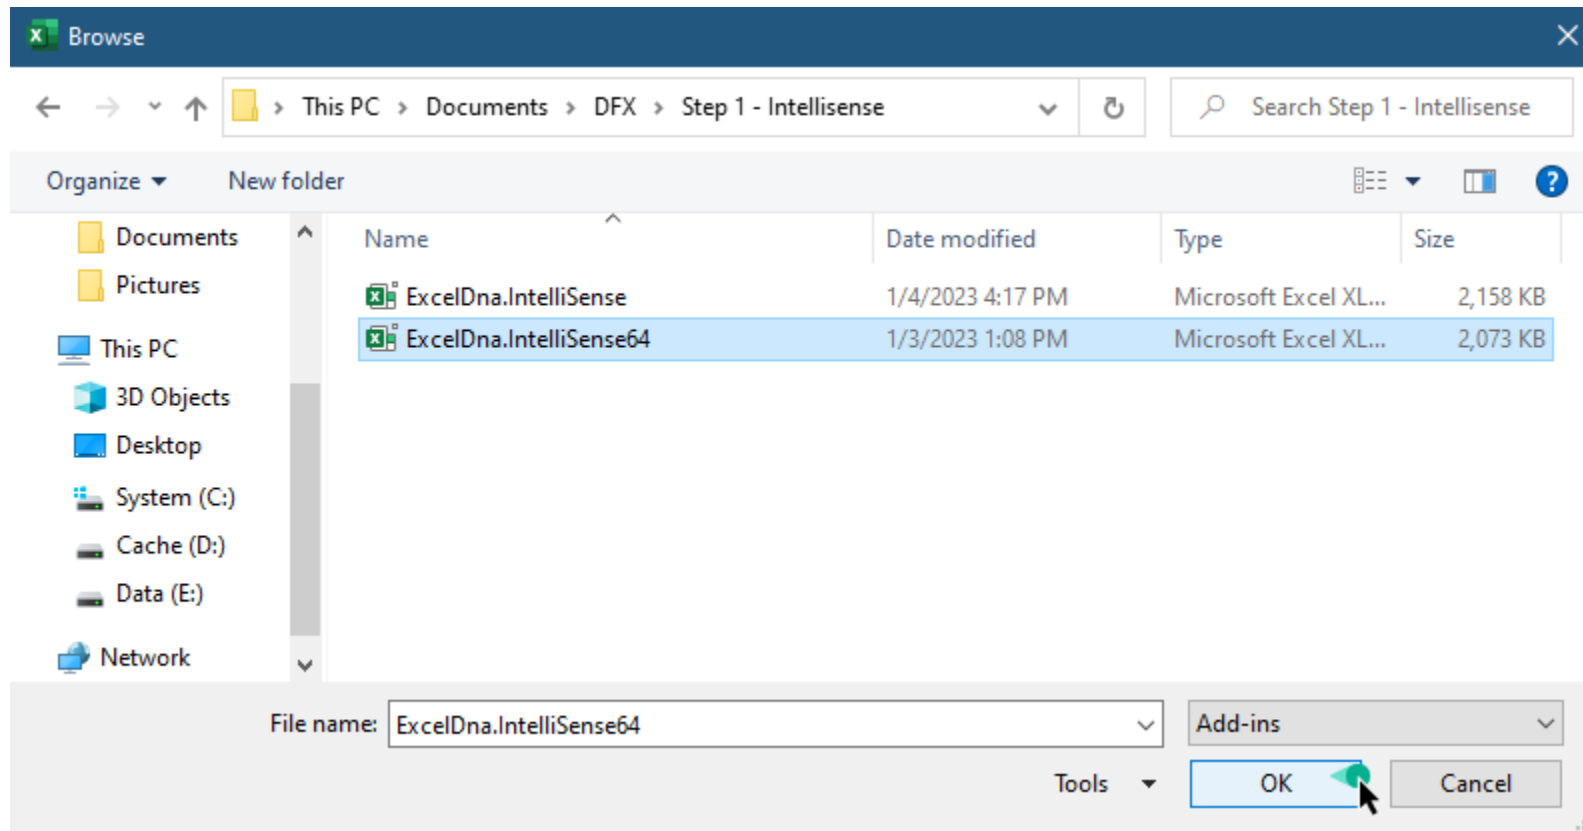

Open Excel -> Developer Tab -> Excel Add-ins

Note: Enable the developer tab if it does not appear on the ribbon. **Follow this URL!**

Browse the add-in

Locate the installation folder, select the add-in and click OK.

Click OK to close the dialog box.
